uRage "SoundZ 710 V2" Gaming Headset

Nothing is more dangerous in a video game than being surprised by your opponent. The gaming accessories brand uRage is presenting the "SoundZ 710 7.1 V2" at the IFA, a gaming headset that generates optimised object-based surround sound thanks to its integrated DTS

Headphone:X 2.0 licence - allowing sounds in the game to be located better than ever before. Simply install the software and get started. This USB full-stereo headset combines first-class 7.1 virtual surround sound with maximum flexibility, as the 2.2-metre-long, single-sided uFlex cable is

detachable and very well protected against kinking by the movable fabric jacket. A new feature of this model is the volume control, which is now done via a rotary control directly on the ear cup. Microphone muting is even faster with the flip-to-mute function: when the microphone boom is raised, the headset mutes immediately. To continue speaking, simply move it down again. The headset achieves the necessary wearing comfort with a mix of breathable mesh pads and adjustable headband with movable microphone boom. Nothing presses on the ears or head here. To make sure that the look is not neglected, six different modes let the headset shine in four colours and two switchable change intervals, depending on the mood. Optimised for the PC and PS5.

Item No. 00217862 uRage "SoundZ 710 V2" Gaming Headset

About uRage

The German brand uRage accompanies gamers of all levels with perfectly coordinated accessories. For casual gamers, semi-pros and e-sport teams, uRage offers a broad-based portfolio of keyboards, mice, webcams, microphones and more.
